

Breast Cancer Clinical Trials

For over two decades and counting, Virginia Oncology Associates has embraced clinical research as a critical component of community-based cancer care. Our affiliations with US Oncology Research, Duke Cancer Network, Hoosier Cancer Research Network and the NCI, along with collaborations with small biotech companies and large pharmaceutical sponsors have brought exciting trials to the people of Hampton Roads.

During this interval, we have enrolled area patients into over 100 breast cancer clinical trials for early stage (neo) adjuvant, locally advanced and metastatic disease. Data from these trials has contributed to more than 20 FDA approvals for breast cancer indications.

Patients have access to immune, targeted, and combined modality therapies. Personalized care is managed by a team that includes their oncologist, advanced practitioner, nurse, and research coordinator.

Who Should be Referred?

- Newly diagnosed patients with triple negative or high-risk HR+, HER2- breast cancer
- Any breast cancer patient with relapsed or refractory disease, including those who are heavily pre-treated
- Patients that express strong interest in clinical trials

VOA can provide local patients access to cutting-edge and innovative clinical trials close to home through one of its multiple Hampton Roads' locations including offices in Hampton & Newport News on the Peninsula and offices in Chesapeake, Norfolk, & Virginia Beach on the Southside.

Additional information about current clinical trials and eligibility criteria is available at <https://virginiacancer.com/breast-cancer-trials>. Please contact Angel Kidd, Clinical Research Coordinator, at angel.kidd@usonology.com or call 757-368-5033.
